### 8 Durability of Gate Units

#### 8.1 Procedure

From AS 1926.1 - 2012 - Appendix F - Test of Durability of Gate Units.

- 1. Install the gate unit in accordance with the manufacturer's instructions on a site which simulates the in situ condition with the gate posts securely anchored into the ground.
- 2. Ensure that the gate and its latch comply with Clause 2.4.
- 3. Measure and record the force (to the nearest 5 N) required to release the latch.
- 4. Release the latch and open the gate to the 90-degree position.
- 5. Release the gate and allow it to close under the action of the self-closing device.
- 6. Repeat Steps (d) and (e) for a total of 10 000 operations or until the latch fails to operate, whichever occurs first. The latch shall not be lubricated or adjusted during this test.
- 7. Inspect the gate to see whether it still complies with Clause 2.4.
- 8. Measure and record the force (to the nearest 5 N) required to release the latch.
- 9. Inspect the gate, including the hinges and latch together with the gate posts, for any damage which would affect the ability of the gate to comply with the requirements of Section 2.

#### 8.2 Results

Number of Operations the sample completed	26,068 cycles
Does the gate still comply with clause 2.4 after test completed	Yes
The force required to release the latch at the start of the test	10 N
The force required to release the latch at the end of the test	10 N
Any damage to the gate, hinges, latching device or gate posts at the end of the test	Nil
Result	Pass

#### 9 Additional Testing for Gate Units

From AS 1926.1 - 2012 - Section 3.4 - Closing and Latching of Gates.

- 1. The gate shall close and latch from fully open to resting on the latch, under both of the following conditions:
  - a. Under the natural weight of the gate.
  - b. With the gate open and after a weight of 25 kg has been placed on the top rail or component at a point 100 mm from the outer edge of the locking stile of the gate for 30 seconds and then removed.
- 2. With the gate closed, the latch and posts of the barrier to which the gate is attached shall be capable of retaining the gate in a closed position when 25 kg is placed at the same location and remains on the gate.

Gate Closes under natural weight	Pass
Gate opened and 25 kg placed 100 mm from locking stile	Pass
Gate closed and 25 kg placed 100 mm from locking stile	Pass
Result	Pass
